

What Fun! It's: Practice with Scientific Notation!

We recommend printing out this page for use as a worksheet.
[Return to Scientific Notation Page.](#)

Review of Scientific Notation

Scientific notation provides a place to hold the zeroes that come after a whole number or before a fraction. The number 100,000,000 for example, takes up a lot of room and takes time to write out, while 10^8 is much more efficient.

Though we think of zero as having no value, zeroes can make a number much bigger or smaller. Think about the difference between 10 dollars and 100 dollars. Even one zero can make a big difference in the value of the number. In the same way, 0.1 (one-tenth) of the US military budget is much more than 0.01 (one-hundredth) of the budget.

The small number to the right of the 10 in scientific notation is called the exponent. Note that a negative exponent indicates that the number is a fraction (less than one).

The line below shows the equivalent values of decimal notation (the way we write numbers usually, like "1,000 dollars") and scientific notation (10^3 dollars). For numbers smaller than one, the fraction is given as well.

	smaller				bigger		
Fraction	1/100	1/10					
Decimal notation	0.01	0.1	1	10	100	1,000	
Scientific notation	10^{-2}	10^{-1}	10^0	10^1	10^2	10^3	

Practice With Scientific Notation

Write out the decimal equivalent (regular form) of the following numbers that are in scientific notation.

Section A: Model: $10^1 = 10$

1) $10^2 =$ _____

4) $10^{-2} =$ _____

2) $10^4 =$ _____

5) $10^{-5} =$ _____

3) $10^7 =$ _____

6) $10^0 =$ _____

Section B: Model: $2 \times 10^2 = 200$

7) $3 \times 10^2 =$ _____

10) $6 \times 10^{-3} =$ _____

8) $7 \times 10^4 =$ _____

11) $900 \times 10^{-2} =$ _____

9) $2.4 \times 10^3 =$ _____

12) $4 \times 10^{-6} =$ _____

Section C: Now convert from decimal form into scientific notation.

Model: $1,000 = 10^3$

13) $10 =$ _____

16) $0.1 =$ _____

14) $100 =$ _____

17) $0.0001 =$ _____

15) $100,000,000 =$ _____

18) $1 =$ _____

Section D: Model: $2,000 = 2 \times 10^3$

19) $400 =$ _____

22) $0.005 =$ _____

20) $60,000 =$ _____

23) $0.0034 =$ _____

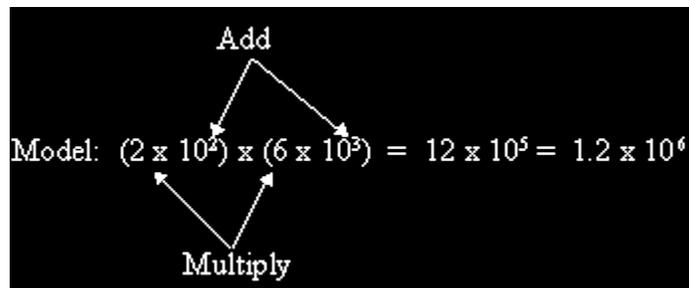

21) $750,000 =$ _____

24) $0.06457 =$ _____

More Practice With Scientific Notation

Perform the following operations in scientific notation. Refer to the introduction if you need help.

Section E: Multiplication (the "easy" operation - remember that you just need to multiply the main numbers and add the exponents).

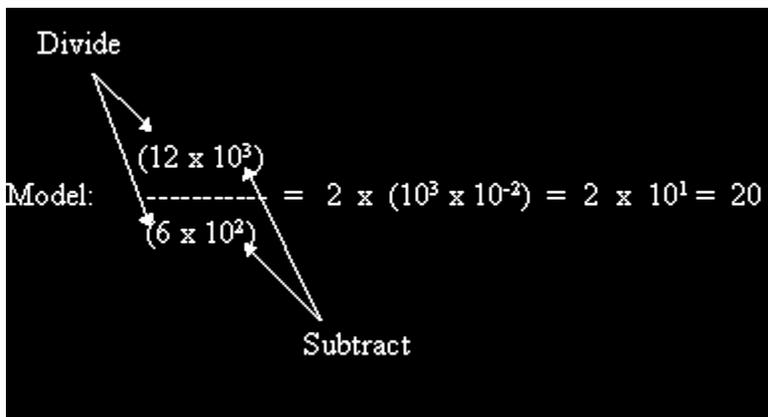

Model: $(2 \times 10^2) \times (6 \times 10^3) =$
 $12 \times 10^5 =$
 1.2×10^6

Remember that your answer should be expressed in two parts, as in the model above. The first

part should be a number less than 10 (eg: 1.2) and the second part should be a power of 10 (eg: 10^6). If the first part is a number greater than ten, you will have to convert the first part. In the above example, you would convert your first answer (12×10^5) to the second answer, which has the first part less than ten (1.2×10^6). For extra practice, convert your answer to decimal notation. In the above example, the decimal answer would be 1,200,000

notation	scientific notation	decimal
25) $(1 \times 10^3) \times (3 \times 10^1) =$	_____	_____
26) $(3 \times 10^4) \times (2 \times 10^3) =$	_____	_____
27) $(5 \times 10^{-5}) \times (11 \times 10^4) =$	_____	_____
28) $(2 \times 10^{-4}) \times (4 \times 10^3) =$	_____	_____

Section F: Division (a little harder - we basically solve the problem as we did above, using multiplication. But we need to "move" the bottom (denominator) to the top of the fraction. We do this by writing the negative value of the exponent. Next divide the first part of each number. Finally, add the exponents).

Model: $\frac{(12 \times 10^3)}{(6 \times 10^2)} = 2 \times (10^3 \times 10^{-2}) = 2 \times 10^1 = 20$

Write your answer as in the model; first convert to a multiplication problem, then solve the problem.

	multiplication problem	final answer (in sci. not.)
29)	$(8 \times 10^6) / (4 \times 10^3) =$ _____	_____
30)	$(3.6 \times 10^8) / (1.2 \times 10^4) =$ _____	_____
31)	$(4 \times 10^3) / (8 \times 10^5) =$ _____	_____
32)	$(9 \times 10^{21}) / (3 \times 10^{19}) =$ _____	_____

Section G: Addition The first step is to make sure the exponents are the same. We do this by changing the main number (making it bigger or smaller) so that the exponent can change (get bigger or smaller). Then we can add the main numbers and keep the exponents the same.

$$\begin{aligned}
 \text{Model: } (3 \times 10^4) + (2 \times 10^3) &= (3 \times 10^4) + (0.2 \times 10^4) \\
 &= 3.2 \times 10^4 \\
 &= 32,000
 \end{aligned}$$

First express the problem with the exponents in the same form, then solve the problem.

	same exponent	final answer
33)	$(4 \times 10^3) + (3 \times 10^2) =$ _____ _____	
34)	$(9 \times 10^2) + (1 \times 10^4) =$ _____ _____	
35)	$(8 \times 10^6) + (3.2 \times 10^7) =$ _____	

43) What is 1.25×10^{-1} ? Is this the same as 125 thousandths?

44) 0.000553 is what in scientific notation?

Operations without anesthesia!

45) $(2 \times 10^3) + (3 \times 10^2) = ?$

46) $(2 \times 10^3) - (3 \times 10^2) = ?$

47) $(32 \times 10^4) \times (2 \times 10^{-3}) = ?$

48) $(9.0 \times 10^4) / (3.0 \times 10^2) = ?$

Food for thought.....and some BIG numbers

49) The cumulative national debt is on the order of \$4 trillion. The cumulative amount of high-level waste at the Savannah River Site, Idaho Chemical Processing Plant, Hanford Nuclear Reservation, and the West Valley Demonstration Project is about 25 billion curies. If the entire amount of money associated with the national debt was applied to cleanup of those curies, how many dollars per curie would be spent?

Answers:

- A) 1) 100 2) 10,000 3) 10,000,000 4) 0.01
5) 0.00001 6) 1
- B) 7) 300 8) 70,000 9) 2,400 10) 0.006
11) 9 12) 0.000004
- C) 13) 10^1 14) 10^2 15) 10^8 16) 10^{-1}
17) 10^{-4} 18) 10^0
- D) 19) 4×10^2 20) 6×10^4 21) 7.5×10^5 22) 5×10^{-3}
23) 3.4×10^{-3} 24) 6.457×10^{-2}
- E) 25a) 3×10^4 25b)) 30,000 26a) 6×10^7 26b) 60,000,000
27a) 5.5×10^0 27b) 5.5 28a) 8×10^{-1} 28b) 0.8
- F) 29) 2×10^3 30) 3×10^4 31) 5×10^{-3} 32) 3×10^2
- G) 33) 4.3×10^3 34) 1.09×10^4 35) 4×10^7 36) 1.664×10^{-3}
- H) 37) 1.6×10^2 38) 2.5×10^{-6} 39) 8.9919×10^{12} 40) -2.9999978×10^2

I) 41) Depends 42) 1600 43) 0.125, Yes 44) 5.53×10^{-4}
45) 2.3×10^3 46) 1.7×10^3 47) 6.4×10^2 48) 3×10^2
49) 160 dollars/curie
